Journal Citation Reports (JCR) provides data for assessing scholarly journals including:

- Impact factor
- Total cites
- Immediacy index
- Eigenfactor score and more

JCR is accessible through the University of Texas Libraries homepage - from the homepage, click on the Databases tab.

Navigate to JCR from the alphabetical list of databases. If you are not on the University of Texas campus you will be required to log in with your EID and password.

Select the Social Sciences Edition and the year you wish to view from the menu.
JCR supports three methods for viewing their assessment data:

1. View a group of journals by Subject Category, Publisher, or Country/Territory
2. Search for a specific journal
3. View all journals

Select the method that suits your needs and click the Submit button.

The example below is from a search for a specific journal, *Educational Research*.

The Impact Factor and other measures are located in the beige box. Click on any of the numbers and terms in blue for an explanation of its meaning. JCR has a very robust Help function that can be accessed from any page. The Help function includes detailed information about the various measures included for each journal and much more.
